

Biomes Futuristic Society Business Economy

Tycoon and business-simulation scaling model for 19 player-owned business types

Revised economy design: distinct growth paths, bottlenecks, core loops, daily incentive triggers, and implementation-ready systems for a society built around private Biomes, Exotic Matter, and timeline collapse.

Design principle: each business should feel like a different machine to grow. A refinery scales through throughput and safety. A restaurant scales through menu, supply, seating, and reputation. A courier scales through trust, speed, and route coverage. The player should repeatedly ask: what is blocking this business from becoming bigger today?

Prepared for Biomes / Harthmere economy design

May 29, 2026

1. Executive Summary

This document expands the existing Biomes business economy into a tycoon-style growth model. The goal is not to make every business a reskinned shop. Each business gets its own way to scale, its own daily friction, and its own reason to matter to the wider town.

The common progression is: worker -> operator -> employer -> infrastructure owner -> civic power. Early businesses should be hands-on and understandable. Later businesses should become systems that employ NPCs, serve recurring contracts, affect town stability, and connect to other businesses.

The best business loop for Biomes is:

Acquire inputs -> produce or provide value -> serve real demand -> reveal a bottleneck -> reinvest into capacity, staff, quality, reputation, automation, or coverage -> unlock larger contracts.

Every business should have four layers of reward:

- Money: profit, rent, service fees, margins, commissions, or subscriptions.
- Reputation: trust, quality, safety, reliability, beauty, health, or civic contribution.
- Capability: new recipes, licenses, staff roles, routes, machines, property types, and contracts.
- Town impact: lower sickness, safer routes, better food, stronger travel, cleaner streets, higher housing value, and more stable Biomes.

2. Shared Business Systems

System	Purpose	What the player manages
Business tier	Controls scale and unlocks.	Starter setup, shop, company, regional operator.
License level	Controls legal access to restricted goods/services.	Permits, inspections, compliance, insurance, penalties.
Inventory	Makes businesses depend on real inputs.	Raw goods, refined goods, fuel, parts, medicine, food, waste, tools.
Production/service queue	Creates return timing and prioritization.	Batches, work orders, repairs, deliveries, rooms, contracts.
Staff	Moves player from worker to owner.	Wages, skill, fatigue, assignment, training, mistakes.
Reputation	Makes quality and reliability matter.	Price power, customer tier, contract access, repeat demand.
Bottlenecks	Creates meaningful daily decisions.	Capacity, inputs, labor, risk, location, speed, cleanliness, safety.
Contracts	Creates recurring demand.	Deadlines, renewals, penalties, bonuses, subscriptions, town requests.
Town needs	Links the business to society.	Food, health, travel, repair, cleanliness, safety, housing, logistics.

Daily incentive triggers should be business problems, not arbitrary login chores. The player returns because an order is due, a batch finished, a crop matured, a room needs cleaning, a route became dangerous, a machine failed, an inspector arrived, or a new contract is about to expire.

3. Business Scaling Matrix

Each business below has a distinct scale-up pattern. This table is the quick reference for what makes each one feel different in play.

Business	Unique scale-up pattern	Main bottleneck	Best daily trigger
Exotic Matter Refinery	Throughput, safety certification, purity grade, and long-term fuel contracts.	Raw Exotic Matter supply; containment downtime	Refinement batch completes; fuel order due
Biome Maintenance & Repair Company	Subscription coverage, emergency dispatch radius, diagnosis speed, and repair crew specialization.	Specialized parts; dispatch time	Subscriber inspection due; emergency ticket appears
Biome Design Studio	Portfolio reputation, reusable template IP, trend timing, premium materials, and client tier.	Rare aesthetic materials; style mismatches	Trend changes; client review posts
Security & Defense Contractor / Mercenary	Contract difficulty rating, squad size, patrol coverage, gear quality, insurance, and threat intelligence.	Injured guards; broken weapons	Bounty board refreshes; protected client requests patrol
Portal Transit Company	Network coverage, route uptime, passenger/cargo capacity, fuel efficiency, safety rating, and destination exclusivity.	Fuel supply; anchor cores	Passenger rush; cargo route renewal
Biome Farming & Rare Foods	Climate specialization, crop cycles, yield quality, processing, supplier contracts, and seasonal planning.	Spoilage; weather failure	Crop ready to harvest; animal care needed
Weapons & Tools	Blueprint library, material tier, repair contracts, durability engineering, custom commissions, and bulk institutional orders.	Metal/crystal supply; restricted permits	Repair queue fills; bulk order due
Magic Goods	Recipe mastery, effect reliability, ingredient rarity, ward maintenance contracts, and controlled-risk experimentation.	Rare ingredients; item expiration	Potion batch expires; ward needs refresh
Exploration Guide	Map ownership, route safety, guide reputation, expedition team size, discovery rights, and client class.	Outdated maps; dangerous routes	Map becomes stale; rare expedition appears
Custom Home & Property Development	Land control, construction capacity, rental portfolio, district planning, financing, and tenant satisfaction.	Permits; heavy materials	Rent collected; construction stage completes
General Trader	Market intelligence, inventory breadth, storage, route access, wholesale relationships, and arbitrage timing.	Stockouts; dead inventory	Price board changes; customer request appears
Hunter for Wild Meat	Ecology knowledge, sustainable harvest rights, cold chain, butchery quality, contract specialization, and trophy/rare creature access.	Spoilage; overhunting penalties	Animal migration changes; rare creature sighting
Medical / Doctor	Diagnosis accuracy, treatment specialization, clinic throughput, medicine inventory, public health contracts, and trust.	Rare cures; patient queues	Patients arrive; outbreak warning
Teleport Owner	Location value, access permissions, linked destinations, traffic tier, pad reliability, and premium service options.	Fuel; link drift	Fuel low; link destabilizes
Waste, Sanitation & Contamination Cleanup	Route density, cleanliness rating, recycling yield, hazmat certification, municipal contracts, and emergency response capacity.	Waste overflow; contaminated gear	Waste bins fill; spill event appears

Business	Unique scale-up pattern	Main bottleneck	Best daily trigger
Repair People / Maintenance Person	Work-order throughput, parts inventory, scheduled service contracts, dispatch speed, and facility specialization.	Missing parts; urgent calls	Work board refreshes; urgent repair call
Food Service / Restaurant / Cook	Menu design, ingredient supply contracts, seating/service throughput, freshness control, catering, reputation, and recipe rarity.	Spoilage; supplier gaps	Lunch/dinner rush; ingredients spoil
Courier	Reliability rating, route knowledge, dispatch capacity, vehicle upgrades, insurance bond, and multi-stop optimization.	Route danger; late deliveries	Delivery board refreshes; same-day bonus job
Hospitality / Inn / Hotel / Shelter	Occupancy, room quality, service bundle, tourism access, safety rating, emergency contracts, and property portfolio.	Dirty rooms; food supply	Check-ins/checkouts; room cleaning due

4. Detailed Business Growth Designs

4.1 Exotic Matter Refinery

Category	Starting cost	Scaling identity
Industrial infrastructure	1,200 credits	Throughput, safety certification, purity grade, and long-term fuel contracts.

Turns unstable Exotic Matter into certified fuel, anchor cores, catalysts, batteries, and safe industrial inputs.

Core loop

Source raw Exotic Matter -> stabilize batch -> refine into certified products -> sell to portals, teleport pads, repair firms, doctors, and magic shops -> reinvest in containment, yield, and safety.

Distinct scale-up path

Stage	What changes for the player
Backyard stabilizer	Tiny batches, high manual labor, high accident risk, small local orders.
Licensed local refinery	Adds safety certification, production queues, small staff, and recurring portal/repair supply.
Industrial refinery	Bulk fuel, multiple product lines, byproduct capture, town contracts, and compliance inspections.
Regional energy supplier	Controls route fuel, emergency reserves, high-grade anchor cores, wholesale pricing, and civic influence.

Growth levers

- Batch size
- purity/yield
- containment capacity
- certification level
- fuel contract volume
- coolant/stabilizer efficiency

Bottlenecks to expose

- Raw Exotic Matter supply
- containment downtime
- hazard cleanup
- inspection failures
- cooling capacity
- skilled technician scarcity

Daily and weekly incentive triggers

- Refinement batch completes
- fuel order due
- leak or instability alarm
- rare stabilizer price spike
- inspection window
- emergency disposal request

Economy connections

Buys from explorers/miners, security, sanitation, and traders. Sells to portal transit, teleport owners, Biome maintenance, weapons/tools, magic goods, doctors, and town governments.

Unique mechanic to make it feel different

Purity-grade economy: higher-grade output unlocks better customers but increases accident risk and requires stricter compliance. Failed batches create hazardous waste instead of simply deleting resources.

4.2 Biome Maintenance & Repair Company

Category	Starting cost	Scaling identity
Technical service	700 credits	Subscription coverage, emergency dispatch radius, diagnosis speed, and repair crew specialization.

Maintains living pocket habitats by repairing weather drift, gravity faults, time leaks, anchor wear, and space fractures.

Core loop

Inspect Biome -> diagnose fault -> acquire required parts/fuel -> perform repair -> issue safety certificate -> convert customer into maintenance subscriber.

Distinct scale-up path

Stage	What changes for the player
Solo inspector	Small home inspections, simple repairs, manual travel, limited tools.
Licensed repair shop	Repair bench, parts inventory, repeat home contracts, and certified reports.
Maintenance office	Multiple crews, service subscriptions, scheduled inspections, and commercial clients.
Emergency response company	Town-scale disasters, crisis dispatch, priority contracts, and regional stabilization coverage.

Growth levers

- Service radius
- crew count
- diagnostic accuracy
- response time
- subscription count
- parts inventory

Bottlenecks to expose

- Specialized parts
- dispatch time
- crew fatigue
- customer trust
- weather system complexity
- unpaid emergency calls

Daily and weekly incentive triggers

- Subscriber inspection due
- emergency ticket appears
- anchor wear crosses threshold
- customer complaint
- weather system failure
- repair parts delivery arrives

Economy connections

Buys stabilized Exotic Matter, tools, parts, courier delivery, and sanitation cleanup. Serves homeowners, farms, hotels, businesses, portal operators, and property developers.

Unique mechanic to make it feel different

Preventive maintenance: customers pay less for scheduled upkeep, but ignored subscriptions can become expensive public disasters that hurt the owner's reputation.

4.3 Biome Design Studio

Category	Starting cost	Scaling identity
Creative property service	500 credits	Portfolio reputation, reusable template IP, trend timing, premium materials, and client tier.

Sells personalized habitat design: terrain themes, furniture packages, climate effects, festival spaces, gardens, lighting, and luxury redesigns.

Core loop

Consult client -> choose theme and budget -> source/craft decor -> install design -> improve property value and happiness -> publish portfolio to attract higher-tier clients.

Distinct scale-up path

Stage	What changes for the player
Freelance designer	Small decor commissions, limited portfolio, direct material sourcing.
Studio storefront	Theme packages, visible showroom, local commissions, and customer reviews.
Luxury design firm	Rare materials, full-Biome redesigns, high-end clients, and festival contracts.
Regional design brand	Mass template sales, franchises, licensing, town beautification contracts, and seasonal collections.

Growth levers

- Portfolio rating
- trend accuracy
- rare decor supply
- installation speed
- template ownership
- client budget

Bottlenecks to expose

- Rare aesthetic materials
- style mismatches
- installation labor
- trend decay
- client satisfaction
- supplier reliability

Daily and weekly incentive triggers

- Trend changes
- client review posts
- festival contract opens
- rare decor appears
- installation deadline
- wealthy collector visits

Economy connections

Buys furniture, plants, lighting, rare decor, construction help, and courier delivery. Serves homes, hotels, restaurants, guild halls, developers, and town planners.

Unique mechanic to make it feel different

Design portfolio loop: every finished job becomes a visible style sample that raises demand for similar jobs, so specialization creates stronger but narrower demand.

4.4 Security & Defense Contractor / Mercenary

Category	Starting cost	Scaling identity
Protection and combat service	600 credits	Contract difficulty rating, squad size, patrol coverage, gear quality, insurance, and threat intelligence.

Protects farms, roads, portals, refineries, hotels, homes, and towns from timeline threats, monsters, bandits, rogue machines, and raids.

Core loop

Review threat contract -> scout danger -> gear squad -> deploy guard/patrol/strike team -> collect bounty and reputation -> repair gear and treat injuries.

Distinct scale-up path

Stage	What changes for the player
Solo mercenary	Basic bounties, personal gear, high active-play dependence.
Guard post	Property defense, patrol assignments, traps, and recurring protection fees.
Security company	Hire guards, assign squads, escort cargo, protect portals, and manage gear durability.
Regional defense contractor	Town patrols, guild wars, disaster defense, armed convoys, and high-risk retainers.

Growth levers

- Squad strength
- patrol radius
- gear tier
- response readiness
- threat intel
- contract risk tolerance

Bottlenecks to expose

- Injured guards
- broken weapons
- high insurance cost
- threat escalation
- morale
- bad intel

Daily and weekly incentive triggers

- Bounty board refreshes
- protected client requests patrol
- raid warning
- guard payroll due
- weapon repair needed
- escort route opens

Economy connections

Buys weapons/tools, medical care, food rations, magic wards, courier intel, and teleport/portal access. Serves farms, refineries, portals, traders, hotels, towns, and guilds.

Unique mechanic to make it feel different

Risk-retainer model: businesses pay weekly for protection, but the contractor must actually prevent losses. Failure triggers refunds, reputation damage, injuries, and higher insurance.

4.5 Portal Transit Company

Category	Starting cost	Scaling identity
Regional transportation infrastructure	5,000 credits	Network coverage, route uptime, passenger/cargo capacity, fuel efficiency, safety rating, and destination exclusivity.

Operates public and cargo portal routes between Biomes, towns, markets, guild halls, shelters, dangerous zones, and remote districts.

Core loop

Secure route rights -> build endpoints -> fuel/stabilize route -> sell tickets/cargo slots/subscriptions -> monitor traffic and failures -> expand into profitable corridors.

Distinct scale-up path

Stage	What changes for the player
Small local gate	One route, limited cargo, manual refueling, fragile reliability.
Town portal office	Multiple routes, ticket clerk, cargo reservations, and service schedules.
Regional transit network	High traffic, bulk cargo, route analytics, security contracts, and maintenance teams.
Inter-Biome transit monopoly	Major infrastructure, emergency evacuation rights, guild logistics, and political leverage.

Growth levers

- Route count
- traffic volume
- uptime
- fuel cost
- cargo capacity
- destination rights

Bottlenecks to expose

- Fuel supply
- anchor cores
- route instability
- security incidents
- peak-hour congestion
- maintenance downtime

Daily and weekly incentive triggers

- Passenger rush
- cargo route renewal
- fuel shortage
- route instability alert
- new town route request
- dangerous route needs guards

Economy connections

Buys portal fuel, anchor cores, security, maintenance, sanitation, and property access. Serves almost every business by reducing travel and logistics friction.

Unique mechanic to make it feel different

Network effect economy: each new route raises the value of other routes. Profit comes from optimizing route pairs, not just owning more portals.

4.6 Biome Farming & Rare Foods

Category	Starting cost	Scaling identity
Agriculture and food supply	300 credits	Climate specialization, crop cycles, yield quality, processing, supplier contracts, and seasonal planning.

Produces crops, herbs, spices, mushrooms, animal goods, medicine ingredients, creature feed, and rare climate foods.

Core loop

Choose crop/animal suited to Biome climate -> plant/feed/maintain -> harvest at correct time -> process or sell raw -> reinvest into climate controls, storage, seeds, and labor.

Distinct scale-up path

Stage	What changes for the player
Garden plot	Basic crops, hand watering, small local sales.
Small farm	Multiple beds, storage, recurring restaurant/doctor orders, and simple workers.
Specialty Biome farm	Rare climate crops, breeding, irrigation, greenhouses, and high-value ingredients.
Commercial food estate	Town supply contracts, processed goods, worker housing, and vertically integrated food supply.

Growth levers

- Yield per plot
- crop rarity
- harvest timing
- climate stability
- processing value
- contract reliability

Bottlenecks to expose

- Spoilage
- weather failure
- seed supply
- labor demand
- water/fertilizer
- pests or creatures

Daily and weekly incentive triggers

- Crop ready to harvest
- animal care needed
- restaurant order due
- festival demand spike
- weather control warning
- rare seed trader appears

Economy connections

Sells to restaurants, doctors, traders, hotels, magic shops, citizens, and towns. Buys repair, sanitation, courier delivery, security, and tools.

Unique mechanic to make it feel different

Climate niche economy: each farm is strongest when it owns a unique climate advantage, so desert spices, snow berries, swamp herbs, and sky fruits become regionally valuable goods.

4.7 Weapons & Tools

Category	Starting cost	Scaling identity
Crafting and equipment	500 credits	Blueprint library, material tier, repair contracts, durability engineering, custom commissions, and bulk institutional orders.

Builds, repairs, and upgrades weapons, tools, scanners, containment gear, farm equipment, construction tools, and specialized work equipment.

Core loop

Buy/gather materials -> craft or repair gear -> tune quality/durability -> fulfill walk-up sales, commissions, or bulk orders -> unlock blueprints and advanced materials.

Distinct scale-up path

Stage	What changes for the player
Workbench	Basic tools, small repairs, hand-crafted output.
Forge/workshop	Weapons, upgrades, repair counter, and local professional customers.
Advanced fabrication shop	Exotic-infused gear, blueprint research, machine production, and quality tiers.
Industrial armory	Town and guild contracts, standardized gear lines, licensed restricted equipment, and field-service teams.

Growth levers

- Blueprint access
- durability rating
- material grade
- craft speed
- repair turnaround
- commission reputation

Bottlenecks to expose

- Metal/crystal supply
- restricted permits
- tool wear
- quality failures
- special orders
- bulk order deadlines

Daily and weekly incentive triggers

- Repair queue fills
- bulk order due
- new threat requires gear
- rare material price drop
- blueprint discovery
- weapon permit inspection

Economy connections

Sells to hunters, security, farmers, explorers, builders, sanitation, repair companies, and towns. Buys refined materials, hides, crystals, and courier services.

Unique mechanic to make it feel different

Durability-driven demand: gear does not vanish instantly, but it wears down through real use. The best shops earn recurring repair and upgrade traffic, not only one-time sales.

4.8 Magic Goods

Category	Starting cost	Scaling identity
Exotic consumable crafting	800 credits	Recipe mastery, effect reliability, ingredient rarity, ward maintenance contracts, and controlled-risk experimentation.

Creates practical anomaly goods: charms, potions, repellents, wards, teleport stones, weather charms, antidotes, and identification services.

Core loop

Gather rare components -> craft effect item -> stabilize and risk-rate it -> sell/consume/install -> learn recipes and manage anomaly fallout.

Distinct scale-up path

Stage	What changes for the player
Ritual table	Basic potions and charms, unstable results, small customer base.
Magic goods stall	Local sales, common wards, repeat consumables, and recipe requests.
Arcane/exotic workshop	Advanced goods, installed wards, effect customization, and disaster-response demand.
Occult laboratory	Elite contracts, relic identification, high-risk research, rare antidotes, and anomaly containment.

Growth levers

- Recipe library
- effect strength
- stability rating
- ingredient rarity
- ward coverage
- research safety

Bottlenecks to expose

- Rare ingredients
- item expiration
- failed experiments
- permit restrictions
- customer specificity
- contamination risk

Daily and weekly incentive triggers

- Potion batch expires
- ward needs refresh
- rare relic request
- disaster demand spike
- ingredient seller visits
- failed craft creates anomaly

Economy connections

Buys Exotic Matter, herbs, crystals, relics, hunter parts, sanitation cleanup, and security. Sells to doctors, explorers, hunters, designers, civilians, and guilds.

Unique mechanic to make it feel different

Effect-matching market: customers ask for specific outcomes, not generic items. Higher precision raises price but requires rarer inputs and better recipe knowledge.

4.9 Exploration Guide

Category	Starting cost	Scaling identity
Knowledge, travel, and expedition service	400 credits	Map ownership, route safety, guide reputation, expedition team size, discovery rights, and client class.

Guides clients through unstable Biomes, ruins, dinosaur zones, rift fields, historical anomalies, and rare resource locations.

Core loop

Scout route -> update map -> accept client expedition -> prepare supplies and guards -> guide safely -> recover discoveries -> sell map intel or access.

Distinct scale-up path

Stage	What changes for the player
Guide license	Basic escort jobs, simple maps, direct active travel.
Field camp	Longer trips, route staging, storage, and survival services.
Expedition company	Assistant guides, dangerous contracts, research surveys, and discovery recovery.
Elite exploration guild	High-value expeditions, exclusive maps, scientific partnerships, and regional route authority.

Growth levers

- Map accuracy
- route safety
- discovery rarity
- client trust
- expedition capacity
- hazard knowledge

Bottlenecks to expose

- Outdated maps
- dangerous routes
- client injuries
- supply weight
- weather/time shifts
- competitor route claims

Daily and weekly incentive triggers

- Map becomes stale
- rare expedition appears
- client requests guide
- route danger changes
- supply restock due
- new anomaly discovered

Economy connections

Buys food, medkits, weapons, magic wards, courier reports, and security backup. Sells to tourists, researchers, hunters, salvagers, museums, towns, and guilds.

Unique mechanic to make it feel different

Map decay and intel economy: routes become less reliable as timeline collapse changes geography, so exploration businesses earn recurring value by keeping knowledge current.

4.10 Custom Home & Property Development

Category	Starting cost	Scaling identity
Construction and real estate	1,000 credits	Land control, construction capacity, rental portfolio, district planning, financing, and tenant satisfaction.

Builds, upgrades, rents, sells, demolishes, and manages homes, shops, apartments, guild halls, farms, workshops, and emergency housing.

Core loop

Acquire land or contract -> stage construction -> source materials and labor -> finish/rent/sell/manage -> collect rent or sale margin -> reinvest into larger properties.

Distinct scale-up path

Stage	What changes for the player
Contractor permit	Small building jobs, single-site materials, simple customer payments.
Construction workshop	Full homes and shops, staged builds, hired labor, and material stockpiles.
Property office	Rentals, sales, tenant services, maintenance contracts, and property upgrades.
Development company	Large districts, apartments, guild halls, civic projects, financing, and town-shaping influence.

Growth levers

- Land rights
- build speed
- material pipeline
- tenant occupancy
- property quality
- financing leverage

Bottlenecks to expose

- Permits
- heavy materials
- worker capacity
- unpaid rent
- maintenance backlog
- zoning conflicts

Daily and weekly incentive triggers

- Rent collected
- construction stage completes
- material shortage
- tenant complaint
- tax/permit notice
- abandoned property auction

Economy connections

Buys materials, tools, design work, maintenance, sanitation, security, and portal/courier logistics. Serves citizens, businesses, guilds, towns, workers, and displaced residents.

Unique mechanic to make it feel different

Portfolio management: profit shifts from one-time building jobs to recurring rent, property value growth, tenant mix, district safety, and infrastructure access.

4.11 General Trader

Category	Starting cost	Scaling identity
Retail and brokerage	300 credits	Market intelligence, inventory breadth, storage, route access, wholesale relationships, and arbitrage timing.

Buys, stores, transports, and resells useful goods across towns and Biomes, connecting specialized producers to customers.

Core loop

Buy low or secure supply contract -> transport/store goods -> stock shop or sell into high-demand market -> fulfill requests -> reinvest into warehouse, data, and supplier terms.

Distinct scale-up path

Stage	What changes for the player
Market stall	Small goods, manual buying, low storage, high local foot traffic dependence.
General shop	Broader inventory, customer requests, supplier relationships, and steady local sales.
Trade warehouse	Bulk goods, wholesale contracts, price tracking, and delivery brokerage.
Regional trading company	Multi-town network, route insurance, market influence, and specialized wholesale divisions.

Growth levers

- Inventory diversity
- storage capacity
- buy price
- sell timing
- supplier trust
- route access

Bottlenecks to expose

- Stockouts
- dead inventory
- dangerous routes
- storage limits
- price crashes
- supplier disputes

Daily and weekly incentive triggers

- Price board changes
- customer request appears
- shipment arrives
- stockout alert
- remote demand spike
- route danger warning

Economy connections

Buys and sells with everyone, especially farmers, hunters, crafters, doctors, builders, repair workers, remote settlements, and new residents.

Unique mechanic to make it feel different

Information advantage: the trader scales by knowing where goods are scarce before others do. Better market data becomes as valuable as more inventory.

4.12 Hunter for Wild Meat

Category	Starting cost	Scaling identity
Food, materials, and wildlife control	300 credits	Ecology knowledge, sustainable harvest rights, cold chain, butchery quality, contract specialization, and trophy/rare creature access.

Provides wild meat, rare cuts, hides, bones, teeth, eggs, bait, leather, and population control without becoming a general security firm.

Core loop

Track creature -> hunt/trap/capture -> process meat and materials -> preserve or deliver quickly -> sell to restaurants, doctors, crafters, traders, or towns.

Distinct scale-up path

Stage	What changes for the player
Hunting license	Basic hunts, hand delivery, low preservation, common animals.
Hunter camp	Processing table, cold boxes, bait crafting, and recurring meat orders.
Butcher/hunter shop	Retail cuts, hides, rare parts, better storage, and chef/doctor contracts.
Hunting lodge	Guided hunts, tourism, conservation permits, high-value contracts, and controlled breeding/culling.

Growth levers

- Tracking skill
- cold storage
- butchery yield
- rare creature access
- permit level
- delivery speed

Bottlenecks to expose

- Spoilage
- overhunting penalties
- dangerous prey
- permit limits
- injury risk
- seasonal migration

Daily and weekly incentive triggers

- Animal migration changes
- rare creature sighting
- meat spoilage timer
- restaurant order due
- pest-control request
- protected species warning

Economy connections

Sells to restaurants, doctors, magic shops, tools/weapons, traders, farms, and towns. Buys weapons, traps, medicine, transport, storage, and permits.

Unique mechanic to make it feel different

Ecology pressure: overhunting makes future supply worse and hurts reputation, while sustainable hunting improves long-term rare creature access.

4.13 Medical / Doctor

Category	Starting cost	Scaling identity
Healthcare and public service	500 credits	Diagnosis accuracy, treatment specialization, clinic throughput, medicine inventory, public health contracts, and trust.

Treats injuries, disease, creature bites, exotic poisoning, time sickness, memory instability, and Biome-related disorders.

Core loop

Patient arrives -> diagnose condition -> consume correct supplies -> treat or stabilize -> earn payment/trust -> restock medicine and expand services.

Distinct scale-up path

Stage	What changes for the player
Field medic kit	Basic healing, small supply stock, manual patient response.
Clinic room	Local patients, treatment bed, medicine shelves, and checkups.
Medical clinic	Multiple beds, staff, pharmacy, recurring patients, and town health contracts.
Hospital/research clinic	Advanced surgery, outbreak response, rare cures, training, and civic healthcare infrastructure.

Growth levers

- Diagnosis speed
- medicine stock
- bed count
- specialization
- patient trust
- public subsidy

Bottlenecks to expose

- Rare cures
- patient queues
- misdiagnosis
- sanitation failures
- staff fatigue
- medicine spoilage

Daily and weekly incentive triggers

- Patients arrive
- outbreak warning
- medicine stockout
- field injury call
- rare cure ingredient needed
- town subsidy task

Economy connections

Buys herbs, wild parts, magic antidotes, clean water, sanitation, courier delivery, and building maintenance. Serves all citizens and every dangerous profession.

Unique mechanic to make it feel different

Triage economy: doctors must choose between profitable private care, urgent emergency care, and subsidized public health. Choices affect town stability and reputation.

4.14 Teleport Owner

Category	Starting cost	Scaling identity
Local transportation and access control	2,500 credits	Location value, access permissions, linked destinations, traffic tier, pad reliability, and premium service options.

Owns a teleport pad, kiosk, emergency beacon, private shortcut, or cargo hop for local fast travel rather than a full regional portal network.

Core loop

Build pad -> link destination -> set access rules/pricing -> refuel and maintain -> sell trips, tokens, cargo hops, or emergency returns -> expand linked pads.

Distinct scale-up path

Stage	What changes for the player
Personal teleport pad	Private travel, low traffic, owner convenience.
Public teleport kiosk	Local fee income, access tokens, simple maintenance.
Premium teleport hub	Multiple destinations, cargo handling, VIP shortcuts, and emergency contracts.
Elite teleport network	High-volume fast travel, private memberships, exclusive destinations, and local infrastructure power.

Growth levers

- Pad location
- destination count
- traffic volume
- fuel efficiency
- access control
- reliability

Bottlenecks to expose

- Fuel
- link drift
- pad damage
- unauthorized use
- peak traffic
- security risks

Daily and weekly incentive triggers

- Fuel low
- link destabilizes
- high-traffic event
- VIP access request
- emergency return trigger
- pad maintenance due

Economy connections

Buys fuel from refineries, parts from tools/repair shops, security, maintenance, and property access. Serves doctors, couriers, explorers, guilds, traders, and tourists.

Unique mechanic to make it feel different

Access-rights gameplay: the owner can create public, private, guild-only, emergency, cargo, or premium shortcuts.
Pricing and permissions shape social value.

4.15 Waste, Sanitation & Contamination Cleanup

Category	Starting cost	Scaling identity
Public health and hazard service	400 credits	Route density, cleanliness rating, recycling yield, hazmat certification, municipal contracts, and emergency response capacity.

Collects waste, recycles materials, composts organics, prevents disease, and neutralizes Exotic Matter spills or time-rift pollution.

Core loop

Collect waste/contamination -> sort recyclable, organic, hazardous, and exotic material -> process/sell/neutralize -> improve cleanliness rating -> win larger service contracts.

Distinct scale-up path

Stage	What changes for the player
Trash cart and permit	Basic pickup jobs, manual sorting, small service radius.
Sanitation shop	Neighborhood/business contracts, composting, recycling, and service scheduling.
Hazmat cleanup crew	Spill response, protective gear, contamination contracts, and certified cleanups.
Municipal sanitation utility	Town-wide contracts, recycling network, disease prevention metrics, and public health authority.

Growth levers

- Route efficiency
- cleanup speed
- recycling yield
- hazmat level
- cleanliness score
- contract coverage

Bottlenecks to expose

- Waste overflow
- contaminated gear
- route distance
- hazard permits
- dirty clients
- outbreak risk

Daily and weekly incentive triggers

- Waste bins fill
- spill event appears
- recycling batch completes
- cleanliness inspection
- restaurant/hotel complaint
- outbreak warning

Economy connections

Serves homes, restaurants, farms, refineries, magic shops, doctors, hotels, towns, and developers. Sells compost/recyclables to farmers, traders, and crafters.

Unique mechanic to make it feel different

Cleanliness-as-infrastructure: sanitation does not just earn money; it raises town health, restaurant ratings, hotel occupancy, farm quality, and property value.

4.16 Repair People / Maintenance Person

Category	Starting cost	Scaling identity
Everyday repair and facilities service	250 credits	Work-order throughput, parts inventory, scheduled service contracts, dispatch speed, and facility specialization.

Handles everyday repairs: doors, tools, pipes, machines, furniture, appliances, rental units, farm equipment, business fixtures, and minor facility problems.

Core loop

Receive work order -> inspect issue -> consume parts and tool durability -> repair object -> upsell scheduled maintenance -> restock parts.

Distinct scale-up path

Stage	What changes for the player
Handyman toolkit	Small jobs, direct travel, limited parts, personal labor.
Repair stall	Walk-up repairs, parts counter, small recurring clients.
Maintenance office	Business service contracts, dispatcher, parts inventory, and route planning.
Facilities maintenance company	Hotels, rentals, public buildings, and towns with preventive maintenance schedules.

Growth levers

- Repair speed
- parts stock
- service contracts
- dispatch radius
- specialty licenses
- maintenance prevention

Bottlenecks to expose

- Missing parts
- urgent calls
- travel time
- tool durability
- low trust
- backlogged contracts

Daily and weekly incentive triggers

- Work board refreshes
- urgent repair call
- parts shipment arrives
- contract visit due
- building decay alert
- tool breaks

Economy connections

Serves all businesses with physical equipment. Buys parts from traders/tools shops, uses couriers, and works closely with property developers, hotels, farms, and restaurants.

Unique mechanic to make it feel different

Preventive maintenance score: businesses that subscribe break down less often, while neglected customers generate higher-paying but reputation-riskier emergency work.

4.17 Food Service / Restaurant / Cook

Category	Starting cost	Scaling identity
Food, hospitality, and buffs	250 credits	Menu design, ingredient supply contracts, seating/service throughput, freshness control, catering, reputation, and recipe rarity.

Turns crops, wild meat, herbs, spices, and rare ingredients into meals, worker buffs, healing soups, travel rations, catering, and social experiences.

Core loop

Source ingredients -> prep menu -> serve customers or contracts -> manage freshness, seating, sanitation, and reviews -> unlock recipes and expand service.

Distinct scale-up path

Stage	What changes for the player
Food cart/home cook	Street food, tiny menu, low seating, direct ingredient sourcing.
Cafe or food stall	Daily local customers, recurring ingredient orders, basic staff, and menu rotation.
Restaurant	Seating, servers, kitchen stations, supply contracts, customer reviews, and worker buff meals.
Luxury restaurant/catering hall	Rare recipes, festivals, guild banquets, tourism packages, and franchise-style reputation.

Growth levers

- Menu margin
- ingredient quality
- seat turnover
- freshness
- sanitation rating
- chef skill

Bottlenecks to expose

- Spoilage
- supplier gaps
- kitchen capacity
- dirty dishes
- staff fatigue
- bad reviews

Daily and weekly incentive triggers

- Lunch/dinner rush
- ingredients spoil
- menu trend changes
- festival catering request
- sanitation inspection
- rare ingredient delivery

Economy connections

Buys from farmers, hunters, traders, sanitation, repair, and couriers. Sells to citizens, workers, hotels, guilds, tourists, security crews, and explorers.

Unique mechanic to make it feel different

Buff economy: meals provide temporary work, combat, travel, healing, or social bonuses, making restaurants useful to other gameplay loops instead of just decorative shops.

4.18 Courier

Category	Starting cost	Scaling identity
Logistics and trust service	150 credits	Reliability rating, route knowledge, dispatch capacity, vehicle upgrades, insurance bond, and multi-stop optimization.

Moves mail, packages, medicine, food, documents, parts, valuables, and small goods between homes, shops, towns, portals, and isolated Biomes.

Core loop

Accept delivery -> choose route and risk -> move item intact and on time -> build trust -> unlock valuable cargo, contracts, and staff dispatch.

Distinct scale-up path

Stage	What changes for the player
Courier badge and bag	Small local deliveries, active route running, low insurance.
Delivery cart	Heavier packages, more stops, basic route planning, and timed bonuses.
Courier office	Dispatch board, staff couriers, business accounts, and package sorting.
Regional logistics company	Multi-town routes, valuable cargo, cargo insurance, route analytics, and contract fleets.

Growth levers

- On-time rate
- trust rating
- route speed
- cargo capacity
- insurance level
- dispatch count

Bottlenecks to expose

- Route danger
- late deliveries
- lost packages
- limited capacity
- vehicle fuel
- theft risk

Daily and weekly incentive triggers

- Delivery board refreshes
- same-day bonus job
- medicine emergency
- route hazard alert
- business supply run due
- valuable cargo offer

Economy connections

Serves doctors, restaurants, traders, magic shops, property managers, guilds, citizens, farms, and towns. Uses security, portals, teleport pads, food, and repair services.

Unique mechanic to make it feel different

Trust ladder: the courier grows from low-value packages to medicine, legal documents, rare ingredients, and escrow because the game remembers delivery reliability.

4.19 Hospitality / Inn / Hotel / Shelter

Category	Starting cost	Scaling identity
Housing, tourism, and emergency relief	700 credits	Occupancy, room quality, service bundle, tourism access, safety rating, emergency contracts, and property portfolio.

Provides temporary rooms, shelter beds, meals, storage, safety, worker housing, tourist lodging, and recovery space after Biome failures.

Core loop

Prepare rooms -> attract guests or town contracts -> feed/clean/protect guests -> collect room revenue -> upgrade comfort, services, and capacity.

Distinct scale-up path

Stage	What changes for the player
Guest room/shelter beds	Few beds, basic lodging, direct cleaning and food supply.
Inn	Travelers, meals, storage lockers, local reputation, and small staff.
Hotel/safehouse	More rooms, security, group bookings, route partnerships, and premium services.
Luxury resort/shelter network	Tourism packages, disaster-response contracts, multi-property operation, and civic housing role.

Growth levers

- Occupancy
- room comfort
- cleanliness
- safety
- food quality
- nearby attractions

Bottlenecks to expose

- Dirty rooms
- food supply
- maintenance backlog
- security incidents
- bad reviews
- seasonal demand

Daily and weekly incentive triggers

- Check-ins/checkouts
- room cleaning due
- tourist group arrives
- crisis shelter request
- guest complaint
- linen/food stock low

Economy connections

Buys property development, design, food, sanitation, repairs, security, couriers, and portals. Serves travelers, workers, tourists, displaced families, guilds, and towns.

Unique mechanic to make it feel different

Occupancy and crisis dual-mode: hotels make steady money from travelers, but shelters gain civic reputation and subsidies during disasters if they reserve emergency capacity.

5. Implementation Model

The economy should use shared backend systems so businesses can be added without writing a new isolated mini-game each time. The difference between businesses should come from their stat modules, contract generators, input/output recipes, and daily event types.

Field	Purpose	Examples
business_id	Persistent identity for the business.	UUID or entity id.
owner_id	Player, NPC, guild, or town owner.	Individual player, guild, town office.
business_type	Chooses rule module.	refinery, courier, restaurant, hotel, doctor, portal_transit.
tier	Controls scale and unlocks.	starter, shop, company, regional.
license_level	Controls legal operations and risk.	food permit, medical license, hazmat certification, portal route permit.
property_id	Where the business exists in-world.	Shop, farm plot, clinic, pad, hotel, workshop.
inventory	Real inputs and outputs.	fuel, food, parts, medicine, tools, waste, crops, refined matter.
staff	NPC labor and player delegation.	role, skill, wage, fatigue, assigned_task.
production_queue	Timed crafting or processing.	refinery batch, crop cycle, meal prep, repair job.
service_queue	Timed service work.	patients, rooms, deliveries, contracts, inspections.
active_contracts	Recurring or one-time demand.	town sanitation, weekly meat supply, fuel order, medical subsidy.
reputation_scores	Multi-dimensional trust.	quality, safety, speed, cleanliness, reliability, luxury, civic trust.
risk_state	Business-specific hazards.	contamination, raids, spoilage, injury, queue overflow, route danger.
daily_report	UI summary that drives return play.	profit, losses, urgent jobs, stockouts, complaints, opportunities.

Business-specific stat modules

Business	Unique stats that should exist
Exotic Matter Refinery	Batch size, purity/yield, containment capacity, certification level.
Biome Maintenance & Repair Company	Service radius, crew count, diagnostic accuracy, response time.
Biome Design Studio	Portfolio rating, trend accuracy, rare decor supply, installation speed.
Security & Defense Contractor / Mercenary	Squad strength, patrol radius, gear tier, response readiness.
Portal Transit Company	Route count, traffic volume, uptime, fuel cost.
Biome Farming & Rare Foods	Yield per plot, crop rarity, harvest timing, climate stability.
Weapons & Tools	Blueprint access, durability rating, material grade, craft speed.
Magic Goods	Recipe library, effect strength, stability rating, ingredient rarity.
Exploration Guide	Map accuracy, route safety, discovery rarity, client trust.
Custom Home & Property Development	Land rights, build speed, material pipeline, tenant occupancy.
General Trader	Inventory diversity, storage capacity, buy price, sell timing.
Hunter for Wild Meat	Tracking skill, cold storage, butchery yield, rare creature access.

Business	Unique stats that should exist
Medical / Doctor	Diagnosis speed, medicine stock, bed count, specialization.
Teleport Owner	Pad location, destination count, traffic volume, fuel efficiency.
Waste, Sanitation & Contamination Cleanup	Route efficiency, cleanup speed, recycling yield, hazmat level.
Repair People / Maintenance Person	Repair speed, parts stock, service contracts, dispatch radius.
Food Service / Restaurant / Cook	Menu margin, ingredient quality, seat turnover, freshness.
Courier	On-time rate, trust rating, route speed, cargo capacity.
Hospitality / Inn / Hotel / Shelter	Occupancy, room comfort, cleanliness, safety.

6. Daily Tick and Contract Generation

A daily tick can make the economy feel alive without turning every business into a passive idle game. The tick should update production, demand, decay, events, and reports, while still leaving important decisions to the player.

Step	What happens	Player-facing result
1. Process queues	Advance production, service, delivery, crop, room, batch, and repair timers.	Completed items, finished jobs, or late penalties.
2. Consume upkeep	Apply wages, fuel, rent, food, parts, maintenance, sanitation, and spoilage.	Operating cost and stock alerts.
3. Generate demand	Use town needs, nearby population, reputation, events, and shortages.	New customers, contracts, requests, and price shifts.
4. Check bottlenecks	Detect full queues, missing inputs, dirty rooms, low fuel, staff fatigue, broken machines.	Daily report tells player what blocks growth.
5. Roll events	Trigger business-specific problems/opportunities.	Spills, VIP guests, rare buyers, raids, outbreaks, rush orders.
6. Update reputation	Reward reliability, quality, safety, speed, and civic contribution; penalize failures.	Better/worse contract access and pricing.
7. Refresh board	Add contracts suitable for license level, reputation, and service radius.	Daily job board feels fresh.

Contract types

Contract type	Best businesses	Why it matters
One-time order	Trader, tools, magic goods, restaurant, farmer	Simple early-game demand.
Recurring supply	Farm, hunter, refinery, trader, restaurant	Creates stable income and restock pressure.
Subscription/service plan	Repair, maintenance, sanitation, medical, security	Turns work into predictable business revenue.
Emergency response	Doctor, security, sanitation, maintenance, hotel	High urgency and high reputation consequence.
Infrastructure route	Portal transit, teleport, courier	Connects places and raises town productivity.
Public/civic contract	Sanitation, doctor, security, property, portal, refinery	Lets late-game businesses affect town-level outcomes.
Luxury commission	Design, restaurant, hotel, property, magic goods	Uses reputation and rare inputs for high-margin jobs.

7. UI Recommendations

Each business should have its own screen, but all screens should share the same layout logic so players can understand every business quickly.

Panel	Purpose	Example content
Daily report	Tell the player what happened while away.	Profit, losses, completed jobs, complaints, urgent problems.
Bottleneck card	Show the single biggest growth blocker.	Storage full, not enough staff, low fuel, dirty rooms, late deliveries.
Active work	Show production/service queues.	Batches, patients, rooms, deliveries, crops, repairs, contracts.
Inventory	Show real input/output stock.	Ingredients, parts, fuel, tools, medicine, waste, finished goods.
Staff	Allow delegation and training.	Assign workers, view fatigue, wage, skill, current task.
Contracts	Show available demand.	One-time jobs, subscriptions, town contracts, emergency calls.
Upgrade path	Make growth visible.	Next tier requirements, license, property, equipment, reputation.
Reputation	Show why customers do or do not trust the business.	Quality, safety, speed, cleanliness, reliability, luxury, civic trust.

Recommended daily report format

- What earned money today.
- What cost money today.
- What completed today.
- What failed or decayed today.
- What contract or opportunity expires soon.
- What single upgrade would most improve the business.

8. Final Design Recommendation

The Biomes economy should not behave like a generic shop simulator. It should feel like a society under stress. Businesses make money, but they also keep civilization functioning while reality is failing.

The strongest version of the system lets a player start small as a worker, then become an owner, employer, landlord, contractor, infrastructure operator, or civic power. The player should never simply click a building to collect coins. They should return to solve business problems: stock is low, a batch is ready, a patient is waiting, a route is unsafe, a room is dirty, a portal needs fuel, a tenant is angry, or a town contract is about to expire.

If each business exposes a different growth problem, the economy gains depth. A refinery feels industrial. A doctor feels like triage. A courier feels like trust and timing. A restaurant feels like freshness and reputation. A hotel feels like occupancy and service quality. A property developer feels like land, tenants, and city building. That difference is what will make player-owned businesses worth coming back to every day.

Appendix: Business types covered

- Exotic Matter Refinery
- Biome Maintenance & Repair Company
- Biome Design Studio
- Security & Defense Contractor / Mercenary
- Portal Transit Company
- Biome Farming & Rare Foods
- Weapons & Tools
- Magic Goods
- Exploration Guide
- Custom Home & Property Development
- General Trader
- Hunter for Wild Meat
- Medical / Doctor
- Teleport Owner
- Waste, Sanitation & Contamination Cleanup
- Repair People / Maintenance Person
- Food Service / Restaurant / Cook
- Courier
- Hospitality / Inn / Hotel / Shelter
